

# How big should this object be? Perceptual influences on viewing-size preferences

Yi-Chia Chen<sup>1,2</sup>, Arturo Deza<sup>1,3</sup>, & Talia Konkle<sup>1</sup> (1Harvard University, 2UCLA, 3MIT)

## Question

Looks wrong!  
**Why?**

## Possibilities

Conflict with **Knowledge**? **Perceptual** Disfluency?

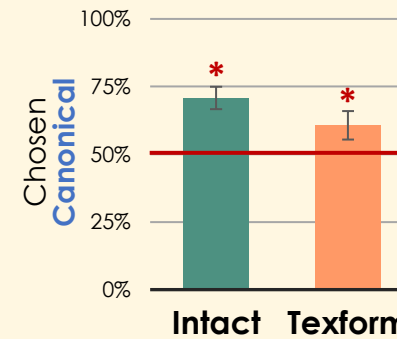

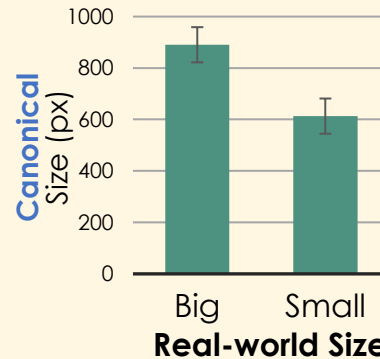

## Experiment (N = 15)

Similar size preference  
For **unrecognizable** texture?

- 1. Adjustment**  
Intact images  
Size preference
- 2. Forced Choice**  
**Canonical** vs.  
**Bigger/Smaller?**

Subjects' Adjustments

## Conclusions

Size preference **Without** Knowledge access  
**Visual features** can Drive canonical size

## Stimuli: Textforms

Local Pooling region

Texture Synthesis Algorithm

Freeman & Simoncelli, 2011  
Long, Yu, & Konkle, 2018

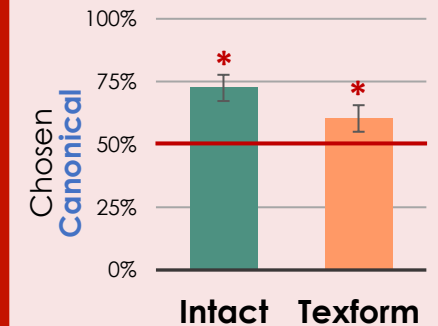

- Preserve coarse shape & texture
- **Unrecognizable** (knowledge)

## Replication (N = 15)

Different stimuli
